# STRUCTURES

□ TOTAL OF 4 STRUCTURES

1) TO REFER DATA OF SELLERS

```
struct sale
{
    char name[20];
    int nic;
    int contact;
    char bank[30];
    char about[100];
} seller[100];
```

# STRUCTURES

## 2) TO REFER BUYER DATA

```
struct buy
{
    char name[20];
    int nic;
    int contact;
} buyer[100];
```

# STRUCTURES

## 3) TO REFER PROPERTY DATA

```
struct property
{
    char name[20];
    int propid;
    char loc[20];
    char type[20];
    float price;
    char status[10];
    int sellercontact;
    int sellerid;
}prop[100];
```

# STRUCTURES

## 4) TO REFER COMMENTS

```
struct commprop  
{  
    int pid;  
    char commentby[30];  
    char text[500];  
}comm[500];
```

# FUNCTIONS:

```
void funseller();  
void loginseller();  
void sellermenu();  
void addproperty();  
void updateprop();  
void del();  
void funbuyer();  
void loginbuyer();  
void buyermenu();  
void filter();  
void report();  
void displayprop();
```

```
void comment();  
void viewcomment();  
void admin();  
void sellerdata();  
void systemdata();  
void buyerdata();
```

# FILING FUNCTIONS

```
//FILING FUNCTIONS
```

```
void saveSellerData();
```

```
void loadseller();
```

```
void savecomment();
```

```
void loadcomment();
```

```
void savebuyer();
```

```
void loadbuyer();
```

```
void saveprop();
```

```
void loadprop();
```

## GLOBAL VARIABLES:

```
//GLOBAL VARIABLES  
int sellercount=1;  
int propertycount=1;  
int currentseller;  
int buyercount=1;  
int currentbuyer;  
int commentCount=0;
```
